Gpi4Med

> ## STOCKMANAGER

Web-based solution for reagents and laboratory consumables stock management.

Features

Enabling effective stock and order management, with the possibility of obtaining consumption statistics and optimising the stock.

- Automatic decoding of product barcodes through primary and secondary barcode recognition logics for reagents
- Product loading and unloading

- Product transfer
- Inventory management
- Alerts for minimum stock, expired products
- Management of restocking orders
- FIFO (first-in, first-out) and FEFO (first-expired, first-out) modes
- Inventory reconciliation
- Full traceability

gpi

Architecture

- Web solution
- Db: SQL Server, PostgreSQL, Oracle
- Cloud or on premise
- Web and mobile version (for Android devices)

Integration

StockManager is designed to be integrated with the hospital's warehouse or other third-party systems, thus enabling easy interoperability with other applications via standard IHE Laboratory Technical Framework integration profiles.

Advantages

The 'Mobile' version for Android devices can be used either in online mode (connection via Wi-Fi) and offline mode. The supported functionalities are:

- Product loading and unloading
- Product transfer
- Inventory
