PRESS RELEASE

GPI BRINGS ARTIFICIAL INTELLIGENCE INTO THE AUTONOMOUS PROVINCE OF TRENTO'S NEW ACCOUNTING SYSTEM

One of the first projects of its kind in Italy. The new system will integrate the accounting operations of the Province and its 86 affiliated entities. The contract has a maximum total value of €14.3 million.

Trento, Italy, 9 November 2026

The Temporary Business Grouping (TBG) led by GPI S.p.A., an Italian and international player in digital healthcare and public administration digitalisation, has been awarded the tender issued by the Autonomous Province of Trento (PAT) for its "**New Accounting Information System**". The platform, which will incorporate artificial intelligence from the outset, will bring the accounting operations of the PAT and its 86 affiliated entities together within a single system. The contract has a term of more than seven years and a maximum total value of €14.3 million, of which **€14 million is attributable to GPI.**

Through a virtual assistant and the automation of the most repetitive tasks, the platform's AI capabilities will support staff in their day-to-day administrative and accounting activities, while ensuring that human operators retain control and responsibility for final decisions. The system will also provide management with Business Intelligence tools capable of identifying hidden anomalies and simulating the potential impact of future budget decisions. AI will thus support the organisation at every level, from those managing the data to those making decisions based on it. This is **one of the first projects in Italy** to integrate artificial intelligence so extensively into an accounting information system for public administration.

The new system will replace the existing accounting architecture of the PAT and its affiliated entities. Its objectives are to harmonise processes, reduce management complexity and improve data consistency. A key feature of the project will be data interoperability across the various administrative bodies, helping to overcome information fragmentation, streamline workflows and enhance the efficiency of administrative and accounting operations. The solution is based on Ascot Plus, the GPI platform used by more than 500 Italian public bodies to manage accounting, asset and administrative processes. The system will serve the Province's Economic and Financial Service, the 10 provincial agencies and the 76 school and training institutions in the area, for a total of around 1,200 users.

"*Delivering a single accounting system for the entire provincial administration, together with the Autonomous Province of Trento and in the region where the Group was founded, is an important milestone for us. Connecting the data and processes of 87 entities means simplifying the administration's daily work and creating the conditions for faster, better-informed decisions. We are starting from a platform already widely used across Italian public administration and, thanks to artificial intelligence, taking it to the next level. We hope this project will become a model for other Italian public administrations*", said **Oscar Fruet**, Sales Director and Deputy Managing Director for Italy at Gpi.

GPI GROUP

Gpi's mission is to make the healthcare systems sustainable through their digitisation, so that everyone can receive high-quality care. **Sustainability and social impact** are the guiding principles and play a crucial role in the strategic and investment assessments of the Group, aware that the solutions and services provided to the community have an impact on the quality of life of individuals.

For over 35 years, driven by a patient-centric vision, Gpi has been working to support healthcare systems by providing the skills and innovative tools necessary to improve prevention and treatment processes. This is achieved through the strategic use of advanced software, technologies, and cutting-edge services.

The Group's strategy is designed to meet the evolving requirements of the constantly changing healthcare sector and to facilitate entry into international markets.

The unwavering commitment of its 7,800 employees and a customer base of more than 9,000 across 70 countries, yielded € 546 million in revenue, an EBITDA of € 118 million in 2025.

Gpi S.p.A. is listed on the Euronext Tech Leaders segment of Borsa Italiana, the Italian stock exchange.
